<b>87.5</b>	Intacct	21.3	11.3	7.0	2.8	36.0	-	3.0	5.3	1.0

The ASA Power Rating is calculated based upon the 350 most important features in accounting software. We assigned either 1 or 2 points to each of these features, depending on their importance. We also separated these features by modules.

We compared these features to 20 of the top mid range accounting software products. We awarded each product either 1 or 2 points for each feature provided right out of the box.

We also awarded partial points in the event that the product did not offer a particular feature right out of the box, but if that feature was available through either customization (75% point value awarded) or through a third party add-on product (25% point value awarded). Based on this methodology, we calculated the ASA Power Ratings.
